PHP Clinic App

Clinic App — User Guide

People Helping Pets · Chicago

Free Bilingual Vaccine Clinics for Underserved Neighborhoods

For roles: VOLUNTEER STAFF

What's inside this guide

1. **Overview** — How PHP Clinic App works and who uses it
2. **Registration Page** — Registering new clients and checking them in
3. **Discharge Page** — Logging vaccines, microchips, and generating certificates
4. **Staff Tools** — Managing events, vaccine lots, records, and reports
5. **Clinic Day Workflow** — Step-by-step guide for the full clinic day
6. **Tips & Troubleshooting** — Common questions and how to handle them

1. Overview

PHP Clinic App is People Helping Pets' internal clinic management app. It helps staff and volunteers run free vaccine clinics smoothly — from client registration to vaccine logging and certificate generation.

Roles

Role	What they do	Pages they use
Volunteer	Run registration and discharge during the clinic	Registration, Discharge
Staff	Everything volunteers do, plus manage events, vaccine lots, and view reports	All pages + Staff Home
Admin	Everything staff can do, plus manage user accounts and roles	All pages + User Management

Client Status Flow

Every client moves through three statuses during a clinic day:

In Queue (registered) → **Checked In (at the clinic)** → **Discharged (vaccines logged)**

At the end of a clinic day, staff mark the event as **Complete** in Staff Home. This automatically resets all clients back to In Queue for the next visit.

2. Registration Page

Used by: Volunteers and Staff

The Registration page is your command center for managing client arrivals. It shows the client queue, lets you search for returning clients, check them in, and register walk-ins on the spot.

Key areas on this page

Search bar — Type a client's name, phone, or email to find them quickly. Press Enter or click Search.

Client list — Shows clients for today's clinic. At a Booster Clinic, pre-loaded from the last Vaccine Clinic. At a Vaccine Clinic, starts empty and fills as people arrive.

Filter buttons — Switch between All, In Queue, and Checked In to focus on the right clients.

Queue numbers — Clients are numbered by arrival order (#1, #2, #3...) so you always know who is next.

Walk-in form — Register a brand new client and their pet on the spot. They are automatically checked in.

Clinic banner — Shows today's event (location and time) at the top of the page when a clinic is scheduled.

Checking in a returning client

1	**Search for the client** Type their name or phone number in the search bar and press Enter.
2	**Select the client** Click their name in the list to open their profile on the right.
3	**Review their info** Confirm their name, phone, and pet(s) are correct.
4	**Check them in** Click the Check In button. Their status changes to Checked In and they join the queue.

Registering a walk-in (new client)

1	**Click Walk-in Registration** The walk-in form appears on the right side of the page.
2	**Fill in client details** Name and phone are required. Email and address are optional but helpful.

3	**Fill in pet details** Name, species, breed, age, weight, and sex.
4	**Save & Check In** Click the button to register and check them in immediately.

Tip: At a Booster Clinic, the list defaults to showing only In Queue clients. Switch to All to see everyone including those already discharged.

Note: Walk-ins are not expected at Booster Clinics. If someone new shows up, you can still register them — they'll appear in search but won't be in the pre-loaded list.

3. Discharge Page

Used by: Volunteers and Staff

The Discharge page is where vaccines and microchips are logged for each pet. Once a vaccine is logged, the client's status automatically updates to Discharged. Rabies certificates can be downloaded or emailed directly from this page.

Key areas on this page

Search & client list — Same as Registration — find clients by name, phone, or email.

Pets section — Shows all pets for the selected client. Click a pet to select it before logging vaccines.

Log a Vaccine — Select the vaccine type — the lot number auto-fills based on what staff set up before the clinic. Fill in the date and log it.

Microchip section — Record whether the pet received a microchip today. If yes, enter the chip number.

Vaccination history — Shows all past vaccines for the selected pet with due dates color-coded by urgency.

Print Memo button — Generates a take-home summary for the client in English or Spanish.

Logging vaccines for a pet

1	**Find the client** Search by name or phone and click their name in the list.
2	**Select a pet** Click the pet's name in the Pets section to select them.
3	**Choose the vaccine** Select the vaccine type from the dropdown. The lot number fills in automatically.
4	**Confirm the date** Today's date is pre-filled. Adjust if needed.
5	**Fill in rabies fields (if applicable)** For rabies vaccines, fill in the tag number, dose type, and duration. Colors/markings may be pre-filled from intake.
6	**Log the vaccine** Click Log Vaccine. The client's status automatically changes to Discharged.

7	**Download certificate (rabies only)** After logging a rabies vaccine, click Download Rabies Certificate.

Logging a microchip

1	**Select a pet** Click the pet in the Pets section.
2	**Go to the Microchip section** Click Yes when asked if a chip was implanted today.
3	**Enter the chip number** Type the 15-digit microchip number and click Save Microchip.

Printing the take-home memo

Click the **Print Memo** button next to the client's name. A dialog will ask whether to print in English or Spanish. The memo includes today's vaccines, next due dates, microchip info (if logged today), and prior vaccination history.

Tip: Due dates in the vaccination history are color-coded: green = more than 6 months away, amber = within 6 months, red = within 60 days or overdue.

Note: Always select a pet before logging a vaccine or microchip. The Log Vaccine button stays disabled until a pet is selected.

4. Staff Tools

Used by: Staff and Admin only

Staff Home is the central hub for managing clinic operations. It's where you set up events before a clinic, configure vaccine lots, view records, and close out the day when the clinic is done.

Staff Home — Pages & Tools

Clinic Events

Role required: Staff+

Create, edit, and delete clinic events. Mark an event as Complete at the end of the day — this automatically resets all client statuses back to In Queue.

Vaccine Lot Management

Role required: Staff+

Set the active lot number for each vaccine type before the clinic. Discharge volunteers see these automatically — no manual entry needed.

Records

Role required: Staff+

View all clients, pets, and vaccination records. Filter by date, search by name, and export to CSV. Includes a Pets tab showing next due dates.

Reports

Role required: Staff+

View clinic statistics for grant reporting — total clients, pets vaccinated, species breakdown, and more.

User Management

Role required: Admin+

Invite new users, assign roles (Volunteer, Staff, Admin), and manage existing accounts.

Setting up before a clinic

1. **Create the event**
   Go to Staff Home → Clinic Events. Add the location, date, time, and select Vaccine Clinic or Booster Clinic.

2	**Set vaccine lots** Go to Vaccine Lot Management. For each vaccine you'll be using, enter the lot number from the vial/box.
3	**Confirm the banner** Open Registration or Discharge and confirm the clinic banner shows today's event at the top.
4	**Brief your volunteers** Make sure everyone knows which page they're working on — Registration or Discharge.

Closing out after a clinic

1	**Go to Staff Home** Navigate to Staff Home → Clinic Events.
2	**Mark the event Complete** Click the Complete button next to today's event.
3	**Confirm the reset** A confirmation dialog will appear. Confirming resets all client statuses to In Queue.

Note: If you forget to mark an event complete, a warning banner will appear the next time you open Staff Home. Click "Close & Reset Now" to fix it.

5. Clinic Day Workflow

This section walks through the full clinic day from setup to close-out.

When	Who	What to do
Before clinic	Staff	Create event in Staff Home. Set active vaccine lots. Brief volunteers on their roles.
Clients arrive	Registration volunteers	Search for returning clients and check them in. Register walk-ins using the walk-in form.
During clinic	Discharge volunteers	Find checked-in clients, select their pet, log vaccines and microchips. Download rabies cert if needed. Print take-home memo.
After last client	Staff	Go to Staff Home. Mark the event as Complete. Confirm all statuses reset.

Vaccine vs. Booster Clinic differences

Vaccine Clinic	Booster Clinic
New clients register on the day	Returning clients from the last Vaccine Clinic are pre-loaded
Client list starts empty	Client list starts with In Queue filter active
Walk-ins expected	Walk-ins not expected (but still supported)
All filter is default	In Queue filter is default

6. Tips & Troubleshooting

Q: I can't find a client in the list

A: Try searching by phone number or email instead of name. If they're a walk-in who just registered, refresh the page. Make sure the filter isn't set to a status that excludes them.

Q: The lot number isn't auto-filling

A: The lot number only auto-fills if staff set it up in Vaccine Lot Management before the clinic. If it's blank, ask a staff member to add the lot in Staff Home.

Q: The Log Vaccine button is greyed out

A: A pet must be selected before you can log a vaccine. Click a pet name in the Pets section first.

Q: I see "Session expired" and got redirected to login

A: Your login session timed out. Sign back in with your email and password — your work is saved.

Q: The client list shows "No clinic scheduled today"

A: There is no event created for today. A staff member needs to add today's event in Staff Home.

Q: A client's status is stuck on Discharged from a previous clinic

A: Staff need to mark the previous event as Complete in Staff Home. This resets all statuses. The warning banner in Staff Home will also prompt this automatically.

Q: The rabies certificate downloaded but some fields are blank

A: Make sure all required rabies fields were filled in before logging — especially Tag #, Dose Type, and Duration.

Q: I need to edit a vaccine record I already logged

A: Go to the client's profile page (click the Profile button) and find the vaccination history for their pet. Click the pencil icon to edit.

Q: A client needs to be removed from the system

A: Open their profile and use the Archive button. Archived clients are hidden from the queue but their records are preserved.

Need more help?

Each page has an interactive tour — click the **?** button in the bottom-right corner and select **Interactive Tour** for a guided walkthrough of that page.
